

Section name references in L^AT_EX*

Sebastian Rahtz

2010/01/25

Documentation overview for hyperref

The documentation for package `hyperref` consists of several files:

Manual The **USER MANUAL** (also available as HTML).

README The **README** file (also available as text file). Here information is collected that is not yet in the manual: new features, package compatibility, limitations, known problems, ...

ChangeLog This file records the version history (also available as text file).

Options This file provides a short option summary.

Bookmark talk, slides Slides for the talk “PDF information and navigation elements with hyperref, pdfTeX and thumbpdf” at EuroT_EX 1999.

Bookmark talk, paper The paper version of the talk.

Source code documentation:

hyperref.dtx This is the source code documentation for hyperref.

backref.dtx “Back referencing from bibliographical citations”

 **nameref.dtx** “Section name references in L^AT_EX” (this file)

3.4	Usage and frontend	7
3.5	Package ifthen support	8
3.6	Compatibility with <code>varioref</code>	8
3.7	Support for listings	10

*This file has version number v2.36, last revised 2010/01/25.

1 Introduction

Cross-referencing to include the *name* of the section, rather than just the number or page. This works by redefining some of the inside L^AT_EX macros, so it is vulnerable to future changes.

2 History

Sebastian Rahtz, for Lou Burnard, March 15th 1994;
 SPQR CERN July 1994;
 Last mod. Sept. 3th MG;
 Sept. 19th SPQR;
 April 11th 1995 SPQR (added section formatting hook);
 April 14th 1995 SPQR (compatibility with hyperref);
 June 22 1995 SPQR (removed typeout from Sectionformat);
 September 22 1997 added varioref hacks by Corey Minyard;
 September 28th changes by David Carlisle.
 More recent changes are recorded in ChangeLog.

The versions before 2009/11/27 v2.32 did not expand the title strings (of `\section`, `\caption`, ...). Then the behaviour switched to expanding, because this allows to remove unwanted macros (`\label`, ...). Despite this method is used in package `titleref` and class `memoir`, the first feedbacks let me conclude that this is not robust enough. Therefore I wrote package `getttitlestring` that uses the non-expanding method as default. It also allows me to use this package in package `zref-titleref`. See the package documentation of package `getttitlestring` how to change the method. It also provides a hook to remove additional unwanted macros, not supported by the package. Example:

```
\usepackage{getttitlestring}
\GetTitleStringDisableCommands{%
  \let\mylabel\@gobble
  \renewcommand\myindex[2]{}%
}
```

3 Implementation

```
1 (*package)
2 \RequirePackage{refcount}[2006/02/12]
3 \RequirePackage{getttitlestring}[2009/12/18]
```

We redefine `\label` so that it also writes the name of the current section to the `.aux` file; if the name ends in a dot, we zap it. To allow for the `hyperref` package, also write fourth and fifth fields (empty by default; used for cross-ref name, and file).

```
4 \def\strip@period#1.\relax#2\@@@{#1}
```

3.1 `\label` stuff

Here is tested, whether package `showkeys` is loaded. But if option `final` is used, the macros of `showkeys` are not defined, so we have to check an additional test.

```
5 \newif\ifNR@showkeys
```

```

165       \edef\x{\endgroup
166         \long\def\expandafter\noexpand\csname beamer@#1\endcsname
167           [####1]{% hash-ok
168             \noexpand\NR@getttitle{####1}%
169             \expandafter\noexpand\csname NRorg@beamer@#1\endcsname
170               [####1]}%
171         }%
172       }%
173     \x
174   }%
175   \NR@PatchBeamer{section}%
176   \NR@PatchBeamer{subsection}%
177   \NR@PatchBeamer{subsubsection}%
178 }{}

```

3.3 Referencing stuff

We default the label and hypertext reference to be empty.

```

179 \def\@currentlabelname{}
180 \def\@currentHref{}

```

Since the second part of the preserved reference now has five parts (number, page, name, hypertext reference and file), we need extra utility macros:

```

181 \long\def\@firstoffive#1#2#3#4#5{#1}
182 \long\def\@secondoffive#1#2#3#4#5{#2}
183 \long\def\@thirdoffive#1#2#3#4#5{#3}
184 \long\def\@fourthoffive#1#2#3#4#5{#4}
185 \long\def\@fifthoffive#1#2#3#4#5{#5}

```

We have to redefine `\ref` and `\pageref` to know about extra reference elements. Make them robust, and compatible with Babel. The Babel switch is mimicked if not already defined. Some support for package `showkeys` is implemented. If option `notref` of that package is set, `\SK@ref` has the meaning of `\@empty`.

```

186 \providecommand*\@safe@activestruer{}%
187 \providecommand*\@safe@activesfalse{}%
188 \def\NR@setref#1{%
189   \begingroup

220       \NR@setref{#1}\@secondoffive{#1}%
221     }%
222   \fi
223 \fi

```

Package `hyperref` uses its own definitions of `\ref` and `\pageref` because it extends the syntax by the star form. `\DeclareRobustCommand` is used by `hyperref`. Package `nameref` can be loaded before, after `hyperref` or after `hyperref`'s definitions in `\AtBeginDocument`.

```

224 \@ifpackageloaded{hyperref}{%
225 }{%
226   \DeclareRobustCommand{\ref}{\T@ref}%
227   \DeclareRobustCommand{\pageref}{\T@pageref}%
228 }

```

3.4 Usage and frontend

Access the (third) name part with `\nameref`;

```

229 \def\T@nameref#1{%
230   \begingroup
231     \let\label\@gobble
232     \NR@setref{#1}\@thirdoffive{#1}%
233   \endgroup
234 }%
235 \ifNR@showkeys
236   \ifx\SK@ref\@empty
237   \else
238     \def\T@nameref#1{%
239       \@safe@activetrue
240       \SK@\SK@@ref{#1}%
241       \@safe@activesfalse
242       \begingroup
243         \let\label\@gobble
244         \NR@setref{#1}\@thirdoffive{#1}%
245       \endgroup
246     }%

```

```

247 \fi
248 \fi
249 \def\nameref{\protect\T@nameref}
An extended form which gives title and page number.
250 \def\Nameref#1{'\nameref{#1}' on page~\pageref{#1}}
The default for \Sectionformat
251 \providecommand\Sectionformat[2]{#1}

```

3.5 Package ifthen support

Package ifthen's \isodd does not work with \pageref because of the extra link and the star form. Therefore we need an expandable variant.

Unfortunately there is no hook in \ifthenelse in order to provide expandable versions without link of \ref and \pageref. As possible target I could only find \begingroup:

```

252 \@ifpackageloaded{ifthen}{%
253   \let\NR@Org@ifthenelse\ifthenelse
254   \def\ifthenelse{%
255     \let\begingroup\NR@TE@begingroup
256     \NR@Org@ifthenelse
257   }%
258   \let\NR@Org@begingroup\begingroup
259   \def\NR@TE@begingroup{%
260     \let\begingroup\NR@Org@begingroup
261     \begingroup
262     \def\ref##1{\getrefbykeydefault{##1}{-}{??}}%
263     \def\pageref##1{\getrefbykeydefault{##1}{page}{0}}%
264   }%
265 }{}

```

3.6 Compatibility with varioref

[This section was derived by Corey Minyard minyard@acm.org from the varioref package]

```

266 \AtBeginDocument{%
